Case study Sardana

H2O MARINE
Sustainable Performance

Customer:
Poedertransport B.V.

Location:
Belgium, Antwerp

The challenge:
Poedertransport BV asked for a sustainable anti-fouling solution for the hull. The cargo hold of the vessel occasionally fills up with water.

The Solution:
16 custom made watertight IP68 transducers and flanges so the entire hull could be protected by the Shipsonic UAF.

System installed:
1x HDS120-240, 2x HDS20-240 and 16x 100Watt IP68 Transducers

The benefit:
Easy installation, no dry docking required, long term fouling protection, 100% sustainable, no maintenance.
